# Where to Play

## Product Portfolio and Roadmap

### Technical Features - Overview

#### Display/Keys

- Values
- Remote display
- Operating status

#### Memory card

- Program + comments
- Start picture
- Data logging

#### Inputs

- 4 digital/ fast reaction
- 4 analog/digital
- 4 temperature (PT/Ni)
- Interrupt
- DCF77 time sync

#### Outputs

- 4 Relay or Transistor
- 2 Analog
- PWM
- Impuls

#### Ethernet

- Programming
- Net
- Modbus TCP
- Web-Server access

#### Extension modules

- Up to 11 extensions per base unit
- Mix any extension with any base unit

Powering Business Worldwide

# The new easyE4

## Hardware

### Connecting terminals basic device

4 Digital- or fast/interrupt inputs

4 Digital- or analog

Power voltage input

4 Digital outputs (T or R)

Huge amount of needed in- and outputs

#### Digital

96 digital inputs + 92 digital outputs or,

#### Analog

48 analog inputs + 22 analog Outputs (12 BIT resolution)

Or just mixed the units to your needs

Powering Business Worldwide

# The new easyE4

## Features extension modules

### No limitations for I/O mixes

- **Any** extension can be combined with any base unit
- Mixes of AC, DC & UC extensions per base unit are possible

### Up to 11 extensions per base unit

- Width: Base unit + 11 big extensions: 864 mm
- Width: Base unit + 11 small extensions: 424 mm

### New connector

- Connect the base devices and extensions from the front, exchanging products without sliding over other modules

### Existing extensions

- Digital
  - 8I / 8R and 4I / 4R UC version
  - 8I / 8T and 4I / 4T DC version
- Analog
  - 4IA / 2QA DC version (12 bit, 0-10V & 0-20 mA / 4-20 mA)
  - 4 temperature inputs (12 bit PT100, PT1000, Ni1000)

Powering Business Worldwide

# The new easyE4

## Features SD-Card

### Start program

- One start program can be defined – the easy automatically copy the start program while starting from the micro SD-card, the current program will be overwritten

### Data Logging

- Circular logger (After using the maximum memory space the oldest entries will be overwritten)
- File logger (Transcript until the max memory is reached)

### Storage for multiple programs

- Storage of multiple programs including the comments on one card

### Start picture

- User can save a start picture as jpeg which will be shown during start-up

### Micro SD Card

- Micro SD cards with 128Mb up to 32Gb (SD and SDHC, FAT12/16/32, Class 2 or 4) Available as accessory

Powering Business Worldwide

2019 Eaton. All rights reserved.

# The new easyE4

## Features User interface

### Characters

- 16x6 letters

### Versatile display

- The display can visualize text, values, semi graphics (bar graphs) and parameters
- The graphical user interface can be designed individually with the easySoft 7

Value display

Bit display

Running text

Bar graph

Static text

Rolling text

Date and time display

Value entry

Timing relay value display

Latching button

### Backlight

- Three background colors (red, green and white)
- The background colors can be used to indicated the operating status or alarms
- Brightness can be adjusted

Powering Business Worldwide

# The new easyE4

## Features Ethernet

### New Ethernet connectivity

- Programming via EasySoft 7
- Net – communication network between easy's

### ModBus TCP

- To communicate with other devices

### Ethernet standard

- Can be used with all standard Ethernet products, like switches, routers
- Internet connection enables new visualization options like HTML5 pages
  - Visualization devices can be connected via LAN or Wireless

### Webserver functionality

- Three options:
  - Remote display can be configured by the user in the EasySoft
  - The easy can host webpages and communicate with external webpages and providing and receiving data from the external webpage, like a cloud dashboard

# The new easyE4

## Features easySoftV7

### Four programming languages

- EDP, LD, FBD, ST

### User function blocks

- Code can be reused
- Different programming languages can be mixed

### New function blocks

- WT- Weekly timer
- YT- Year time switch
- AL- Alarm function block
- DL- Data logger

### Watchdog

- Monitoring of cycle time to protect for delays or endless loops

### Additional

- Customized start-up logo
- Subprograms for a better overview (not in EDP)
- Interrupt functional blocks (not in EDP)

Function Block Diagram (FBD)  
combine predefined function blocks

Structured Text (ST)  
implementing loops & cases

```
IF M02 = TRUE THEN
  T01 {
    EN := I05,
    RE := I11,
    ST := ,
    I1 := T#25ms,
    I2 := T#70ms,
    Q1 := Q01,
    QV :=>
  };
END_IF;

FOR MD01 := 1 TO 10 BY
  Q01 := I04;
```

Powering Business Worldwide

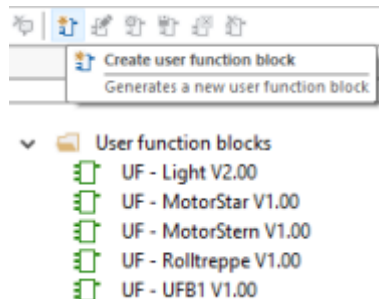

# The new easyE4

Create your own function block

## Technical Features – User function block

- The user creates the code for this subprogram and can reuse it as often as they want
- The user function blocks are added to the library
- Different programming languages can be mixed by writing the user function block in a different programming language than the main program

Create user function block

## Application Notes – example: “Belt conveyor control”

### 3-Belt Conveyor Control

#### Task definition

easy is required to control 3 conveyor belts.

Start is used to switch on the system and Stop to switch it off.

With Start switched on, the conveyor belts start up with a delay of two seconds (belt 1->2->3), as soon as an object is detected in front of the Conveyor start proximity switch. Each conveyor belt is on for 10 seconds after activation. If no object is reported at the Conveyor start proximity switch within this time, the conveyor belts switch off automatically with a 10-second delay (belt 1->2->3).

The daily unit quantity of transported parts is counted at the end of conveyor belt 3 at the Belt 3 proximity switch. The monitored quantity is also retained in the event of a power failure. The daily quantity value is cleared at the end of the day (23:59 pm).

If a fault occurs when the conveyor system is

#### Device class used

easy-E4

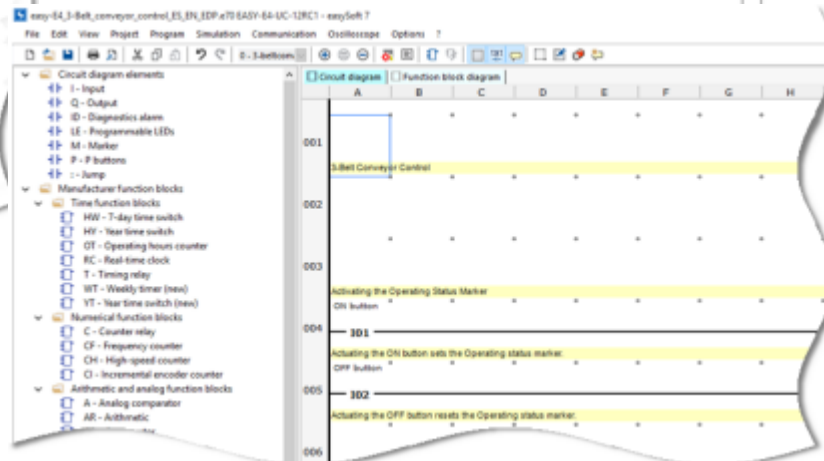

#### Wiring

#### Inputs

- I01 Start button
- I02 Stop button
- I03 Conveyor start proximity switch
- I04 Belt 3 proximity switch
- I05 Motor protection 1-3 aux. contact
- I06 Run empty button
- I07 Emergency-stop button
- I08 Fault reset button

#### Outputs

- Q01 Belt 1 motor
- Q02 Belt 2 motor
- Q03 Belt 3 motor
- Q04 Fault indicator light

Powering Business Worldwide

# The new easyE4

## Application example – Material Handling (MOEM)

### Conveyor control

### Application description

This application is to control a conveyor belt system. Conveyor control with two motors 3phs, original design used, no controller but simple aux. switches for contactors and timer relays.

Estimated cost control components € 218,00

### Value proposition

#### SOME NEEDS:

- Lower the cost
- Synchronize conveyor control
- Must be simply expandable
- Predictive maintenance

Powering Business Worldwide

#### Outcome:

- Less control components need aux switch and expensive time relays, easyE4 approx. € 90 euro
- Synchronization of the belt is easy to realize due to Software
- Expandable up to 11 modules local
- Counting of operating hours makes it possible to plan maintenance

# The new easyE4

## Application example – greenhouse (MOEM)

### “Simple” greenhouse control

### Application description

This application controls the lights and pumps which filter and purify the water, manual handling is required, like status information and alarms via mobile phone

Estimated cost for control components + Ethernet communication Module € 187,00

### Value proposition

#### SOME NEEDS:

- Switching UV daylights and tube lights
- Pump control
- Alarms not only on-site but also via mobile phone
- Manual / Auto Switch

Powering Business Worldwide

#### Outcome:

- The “onboard DCF77 clock” is perfectly made to control and switch the UV-daylight on needed times and follow the summer to wintertime changes.
- Alarm text can be displayed on the easy but also via the WEB browser to a mobile phone
- Program changes can easily be made on the device

2019 Eaton. All rights reserved. ➤ Price estimation easyE4 € 135,00

# The new easyE4

## Application example – Silo control

### “Simple” silo control

### Application description

This application is to measure the level of the two tanks, to adjust the temperature and to control the pumps of the silos.

Estimated cost control components € 320,00

### Value proposition

#### **SOME NEEDS:**

- Synchronize the pump control
- Implementation of dependency of single components
- Visualization of errors and error messages on the display
- Cost reduction

Powering Business Worldwide

#### **Outcome:**

- One base device and a temperature module replace the application → cost 155€ (cost reduction of over 50%)
- Central control for level monitoring and synchronized pump control
- Various communication options and the integrated WebServer for a sophisticated visualization

# The new easyE4

## Technical summary

### Faster & safer wiring

Mix AC, DC & UC  
Push In clamps

### Automatic clock

DCF 77

### Fast & flexible programming

User library  
FUP, KOP, ST  
Micro SD card slot  
Easy Soft 7  
Upwards compatible programs

Powering Business Worldwide

### Higher Flexibility

Mix AC, DC & UC  
188 I/O's

### Allow big system setups

188 I/O's

### Modern communication options

Direct BM com.  
ModBus TCP  
Webserver  
Integrated Ethernet  
(Easy) Net  
SSL Email function  
DCF 77

### Reaction time like micro control

Interrupt

### Data logging

Micro SD card slot

### Compact assortment

Mix AC, DC & UC  
14 types

### State of the art visualization & customization

Webserver  
Integrated Ethernet  
Start with firm logo  
SSL Email function  
Start with firm logo  
Color display

### Easy entry in automation systems

User library  
FUP, KOP, ST  
Easy Soft 7

### Investment protection

Upwards compatible programs  
High pw standards  
Link SW ID & HW ID  
5x more memory

# The new easyE4

## Summary

**Ethernet** allows a variety of communication options.

easySoft speaks your programming language  
**Four to choose from!**

**DCF77 radio signal evaluation and Ethernet** services ensure second-precise date and time information.

**188 in-/outputs** within one easyE4 system covers a wide range of applications.

**Up to 11 local expansion modules on one base unit** allow maximum flexibility.

**Unrestricted combination possibilities** of basic devices with expansion modules enable the simplest handling.

**Worldwide use** due to all current approvals.

**Various display and visualization options** through integrated display, web server, Ethernet options.

**Large voltage variety** in a compact range.

**Interrupt functions** enable fast event detection and short response times.

## Sneak Preview

- UC & DC devices
- Analog extension
- EasySoft V7.0

- AC devices
- PT100/1000 Temperature Module
- EasySoft V7.1 with new function blocks

- Push-In terminals for the entire portfolio
- Nano Remote Display
- EasySoft V7.2 with more new function blocks
